PROFILE 03

I build and maintain real production web applications used by real users. I've taken products from MVP to public launch, owned frontend and backend development, and kept systems running as usage grew. I care about clean code, performance, and building software people actually use.

TECH STACK 04

React.Js, TypeScript, Python, Flask, PHP/Laravel, SQL, MySQL, Rest API, Git, GitHub, Tailwind CSS, Figma, Linux, WordPress

EDUCATION 05

ALX, Holberton School 2023-2024

Software Engineering Program

ISTA, OFPPT 2017-2019

Vocational Degree in Software Development

PROJECTS 06

Selected projects and detailed case studies available at: wadi3.codes

LANGUAGES 07

English Work Proficiency

Ouadia EL-Ouardy, Full Stack Developer

EXPERIENCE 02

2024.06 - Present | Self-employed

AtlasLingua, Founder & Full-Stack Web Developer

- Built and launched a production translation platform, growing from MVP to a public product with 100–200 daily visitors.
- Owned the system end to end, including frontend (React, Tailwind), backend APIs (Python), database design (MySQL), and deployment.
- Deployed and maintained the application on a DigitalOcean VPS for 8+ months with 100% uptime, scaling infrastructure in response to traffic growth identified through error log analysis.
- Integrated third-party services (Anthropic, SendGrid, Algolia) for translation, email notifications, and advanced search.
- Improved frontend performance through lazy loading and bundle optimization, reducing load times by ~30% as usage grew.
- Actively maintained and evolved the platform over 1.5+ years, processing hundreds of thousands of translations and resolving production issues.
- Optimized deployment infrastructure by migrating to Heroku/Vercel, reducing operational costs by ~20% while maintaining application performance.

2022.12 - 2023.03 | Riyadh, KSA | Full-time

Super Office KSA, Web Developer

- Delivered production features for a real estate admin dashboard used daily by internal staff.
- Translated Figma designs into functional Laravel views and backend logic aligned with product requirements.
- Implemented PHP/Laravel workflows for property listings, availability, and bookings.
- Identified performance bottlenecks and implemented optimizations to improve load times and media handling.
- Refactored legacy jQuery code to vanilla JavaScript, reducing the JavaScript bundle size by ~20%.
- Delivered biweekly reports summarizing implemented features and progress.

2021.01 - 2022.06 | Casablanca, MA | Contract

Maghreb Secours, Full-Stack Web Developer

- Designed and delivered a custom charity management system under a tight 1-month deadline, replacing a slow legacy application.
- Built end-to-end workflows for donor, donation, and invoice management using PHP, Laravel, and MySQL.
- Reduced daily operational steps for staff by ~50%, enabling faster access to critical information.
- Implemented secure authentication with role-based access for 5–10 staff members, managing thousands of donor records.
- Deployed and maintained the system in production, where it has been used daily for 5+ years without major issues.
